

## What's New in 3.4.x

There are important menu changes in 3.4 for all IL, TS, and HS cameras, but the big news is the release of FasFire LR for HS Series cameras, which replaces LR Mode for cameras with the Long Record option. [3.4 Update Video](#)

### Introducing FasFire LR for HS Series Cameras

- FasFire LR may be used with external SSDs as well as the internal Camera SSD
  - Performance based on Device: often faster than previous version LR captures
  - No limit to the external SSD performance or size!
- FasFire LR to external SSDs may use standard EXT4, exFAT, or NTFS file systems
  - Image Memory (IM) and FasFire LR (FFLR) recordings may coexist on a drive
  - No need to format the SSD when changing between FFLR and IM Modes
  - Multiple FFLR Basic, ROC, or BROCC recordings may be captured
- FasFire LR allows Review While Record
  - Preview 4GB segments of recording while capture progresses
- [Calculator](#) available optimizing performance of BROCC recordings

### Menu Changes in FasMotion for IL, TS, and HS Cameras

- Storage Settings Tab has been replaced with "Capture Settings"
- Storage Device management is now accessed via File > Open Storage Device...
- Recording Mode controls have moved from Record Settings to Capture Settings
- Session Recording Capacity moved from Record Settings to Capture Settings
  - Capacity slider now active for LR recordings on the HS
